

35 MSS LARC patients | good n=18 | bad n=17 | 14 paired pre/post

Pre-CRT biopsy

Post-CRT biopsy

Response endpoint

Radiation-phase sampling window (this study)

Final TNT response (Dworak TRG 0-1 vs 2-3) is assessed after surgery, after the full TNT regimen. Molecular profiling is powered only by the pre-CRT / post-CRT biopsy pair — this is the mid-treatment decision window.
