

Sample flow — TNT discovery cohort (N=35 patients)

Reconciles per-analysis n across WES, RNA-seq, paired, and integrated tables

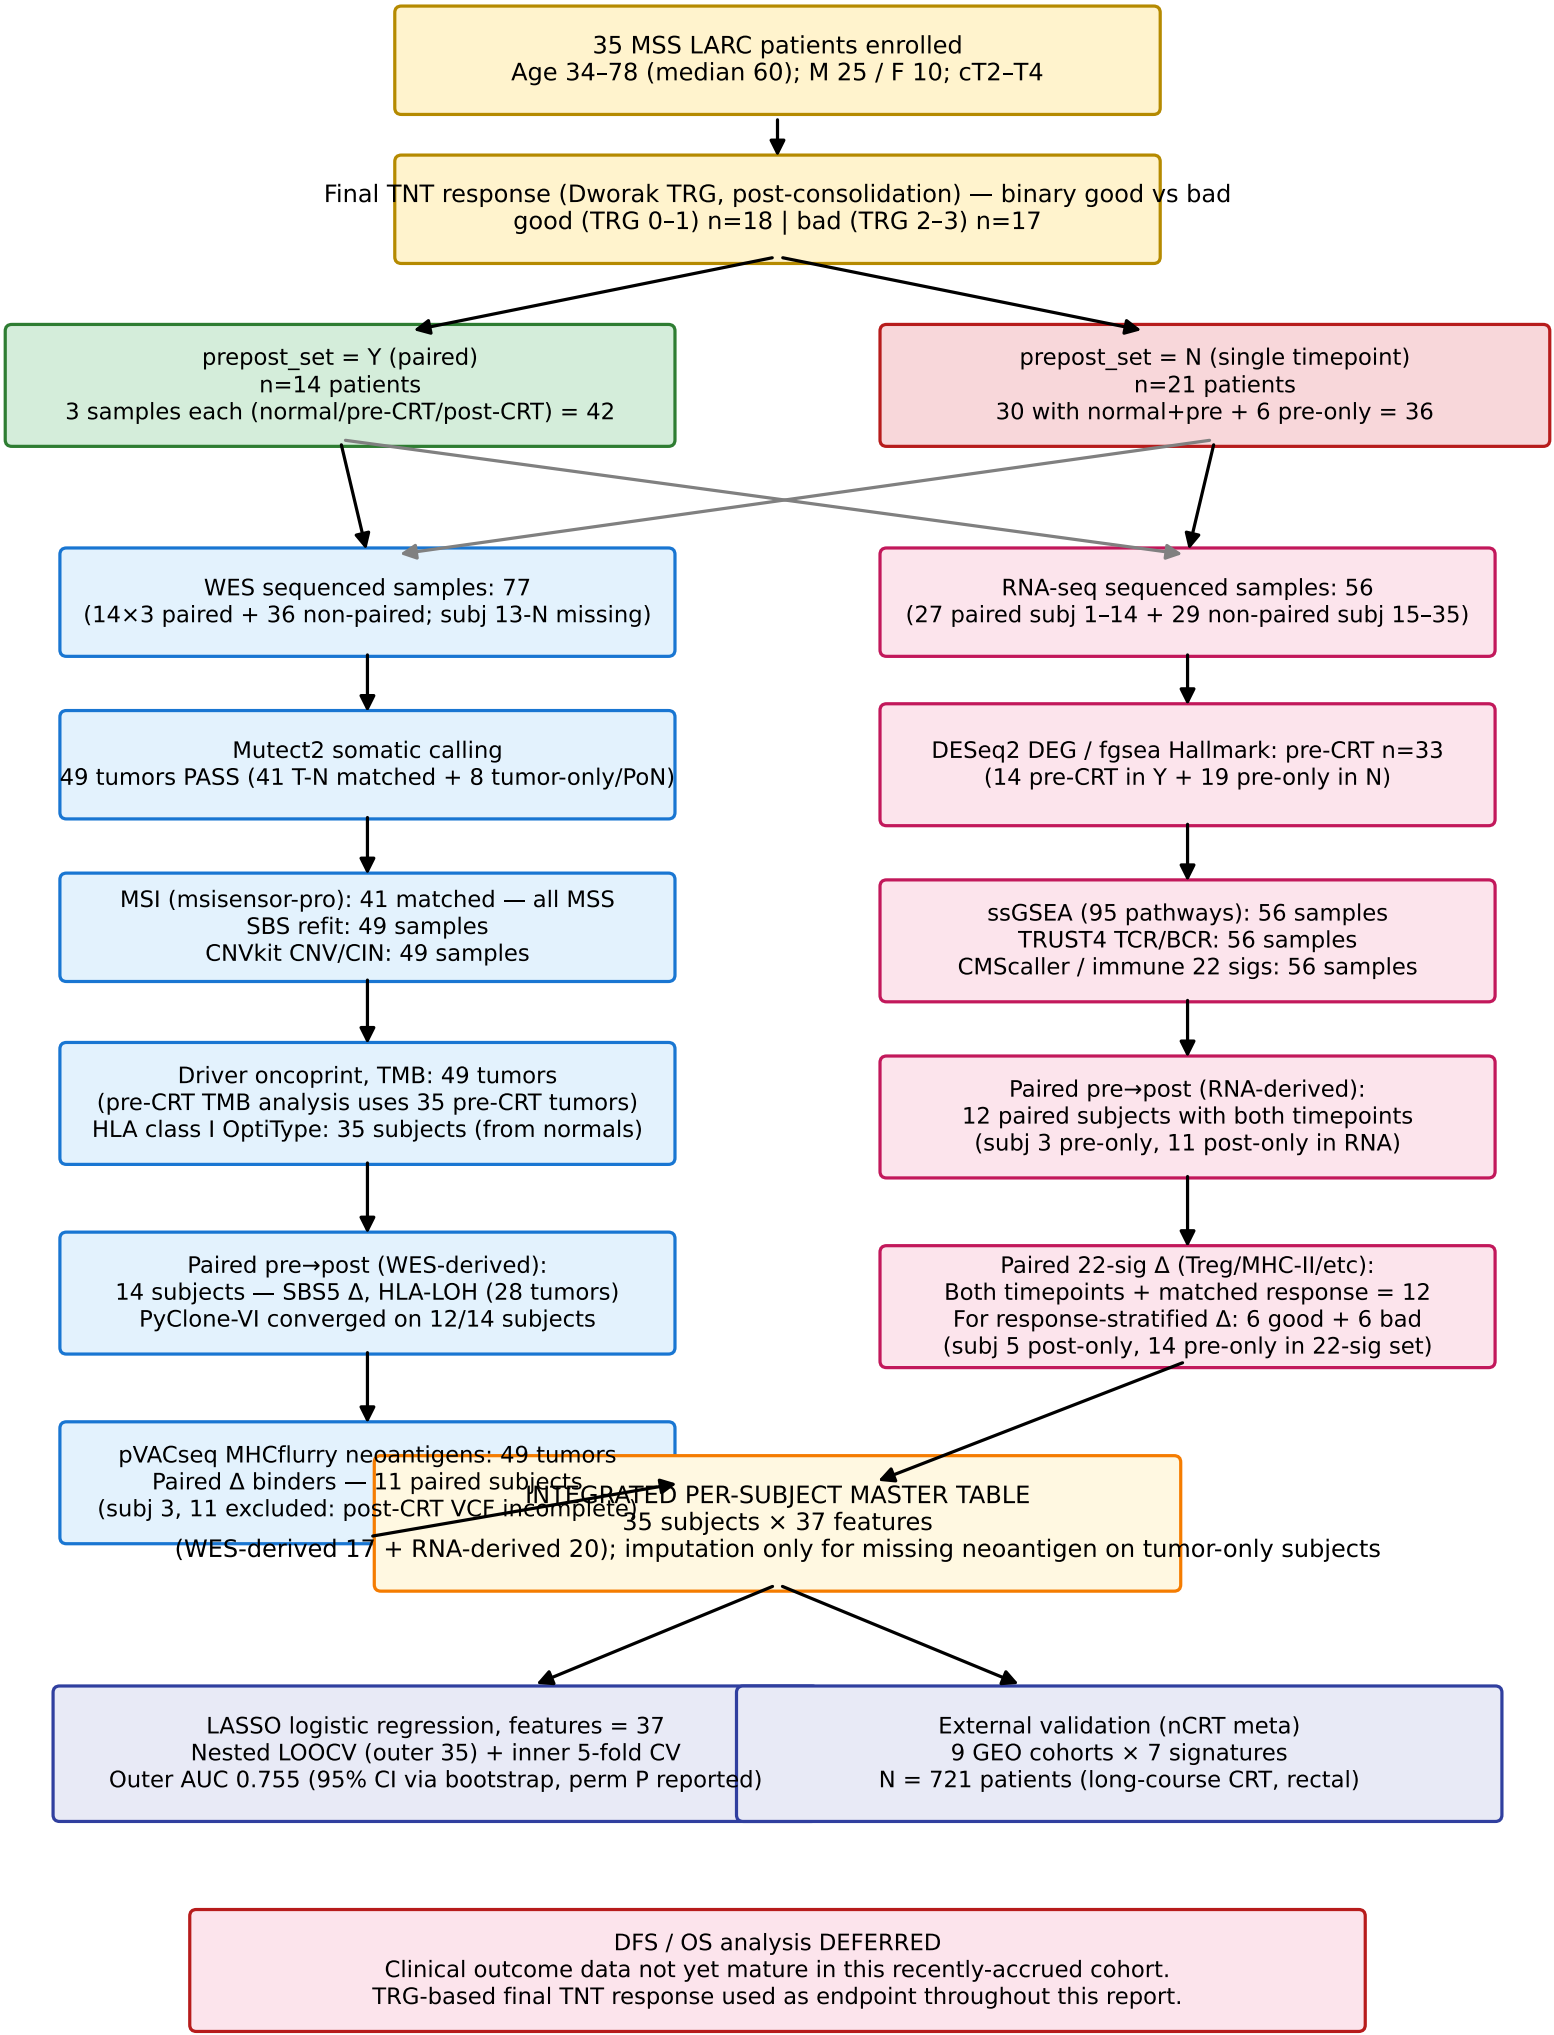

Fig S1. CONSORT-style sample flow diagram reconciling all per-analysis sample counts. WES branch (blue) includes 77 sequenced samples collapsing to 49 PASS tumor somatic VCFs; RNA-seq branch (pink) includes 56 samples collapsing to 33 pre-CRT for DEG/GSEA and 12 paired pre/post for Δ analysis; integration produces a 35x37 subject-level master.
