

Supp Fig S26. Subject-level deep-dive — s4, s2, s11

*For each subject, 17 composite axes shown as horizontal bars (z-score units); pre-RT as hollow bar, post-RT as filled bar.
s2 = textbook good (inflamed-expansion route). s4 = atypical good (antigen-presentation-centric route, B-cell ↓).
s11 = IBI archetype (bad, cold baseline + moderate post Δ but CD8 effector stays flat).*

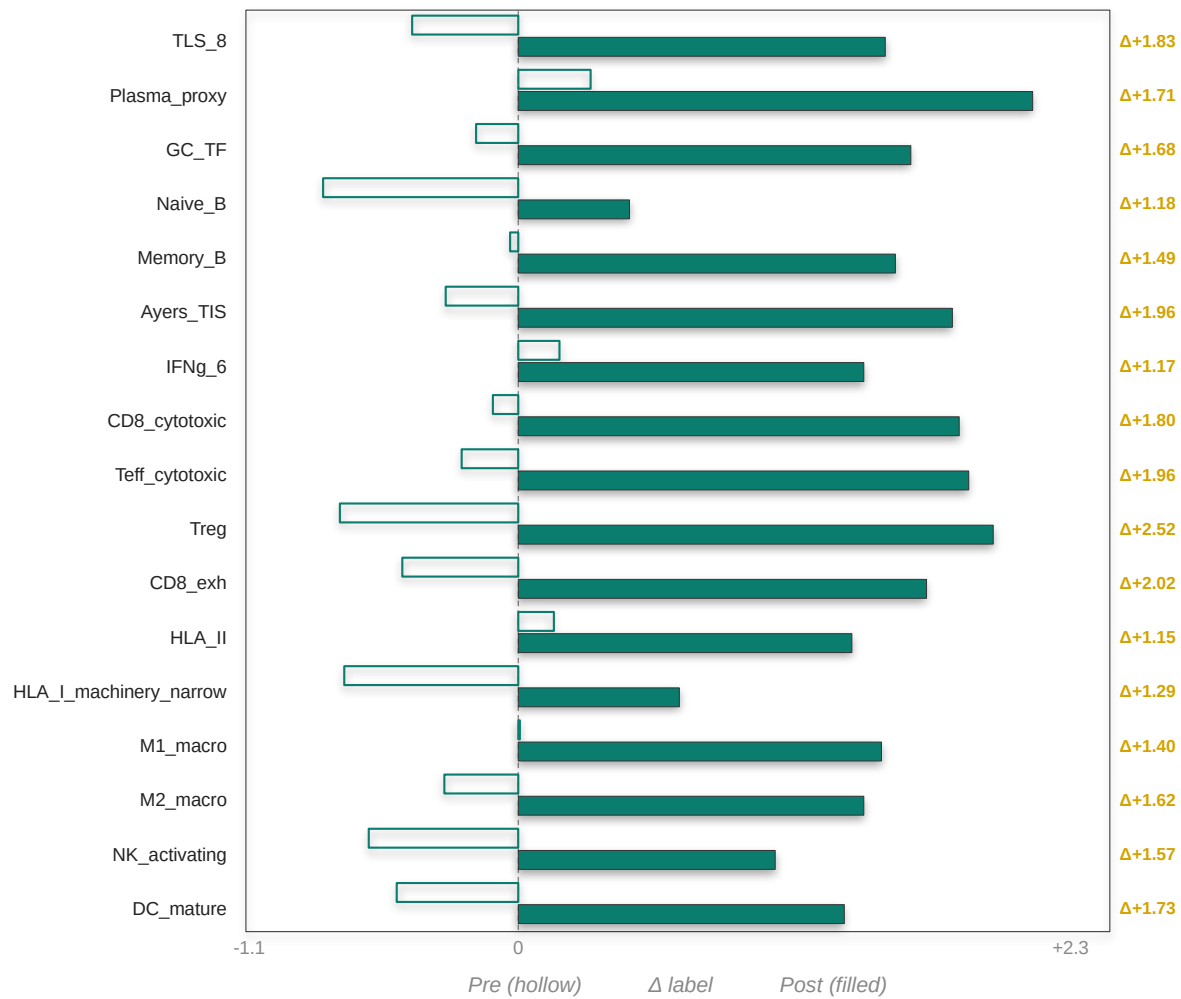

s4 good (atypical pCR)

Pre-RT: hollow teal/coral bar. Post-RT: filled. z = NanoString composite z-score across 12-sample matrix.

s2 good (textbook pCR, inflamed-expansion)

Pre-RT: hollow teal/coral bar. Post-RT: filled. z = NanoString composite z-score across 12-sample matrix.

s11 bad (poor, IBI archetype)

Pre-RT: hollow teal/coral bar. Post-RT: filled. z = NanoString composite z-score across 12-sample matrix.
