

A

36-pair baseline × cascade-Δ convergence test — null with near-0.05 emphasis (amber =  $0.05 \leq P < 0.10$ ; silver ♦ = manuscript headline pair)

Spearman r (n = 11–12 paired; MSI\_pct rows have n = 11, others n = 12)

■  $P < 0.05$

■  $0.05 \leq P < 0.10$

■  $P \geq 0.10, r > 0$

■  $P \geq 0.10, r < 0$

■ headline pair ♦

Gold dashed =  $|r| = 0.58$  ( $P = 0.05$  at  $n = 12$ ). Shaded gray zones =  $|r| > 0.58$  (significant zone) — no hit lands inside.

# B

### Purity-adjusted paired $\Delta$ sensitivity — raw vs purity-adjusted $\Delta$ (Tarabichi 2021 motif)
