ROC curve comparing the performance of three models: LASSO LR, Elastic Net LR, and Random Forest. The x-axis represents the False positive rate (1 - specificity) and the y-axis represents the True positive rate (sensitivity). The dashed diagonal line indicates random performance (AUC = 0.5). The shaded regions represent the 95% confidence interval (CI) for each model's AUC.

Model	AUC	95% CI
LASSO LR	0.755	0.55–0.91
Elastic Net LR	0.670	0.46–0.83
Random Forest	0.577	0.40–0.78
Random	0.5	-

Forest plot showing the enrichment of 15 biological processes in the HSA-568532 dataset. The x-axis represents the Median A (genool - poor), 95% bootstrap CI, ranging from -0.6 to 0.5. The y-axis lists biological processes. Each process has a red dot representing the median and a horizontal red line representing the 95% bootstrap CI. The p-value for each process is listed to the right of the plot. A legend at the top right indicates '1 Genool' and '1 Poor'.
